

Redwand Consulting

Safety Management Systems (SMS)

Redwand Consulting supports organisations to take an integrated approach to managing safety, risk, regulatory compliance and governance, through the development and implementation of Safety Management Systems (SMS).

Many organisations correctly focus on meeting their statutory and regulatory compliance requirements.

Organisations in highly regulated, safety critical industries have long understood that they need to do more than just be compliant to protect their customers, staff and the viability of their business.

Safety Management Systems are recognised as the most effective way to integrate the management of safety and associated risks with compliance and business practices.

We Offer

Our consultants work with clients to develop and implement a SMS that is proportionate, practical and effective in the consumer-centric environment of aged care.

We do this by:

- Developing appropriate policies, processes and procedures
- Developing a safety culture which is embedded into daily practices
- Ensuring risk management practices are understood and undertaken
- Utilising audits, investigations and corrective actions as mechanisms for continuous improvement
- Developing an effective training and education regime for all care providers.

Benefits of using SMS:

- Demonstrates a commitment to the safety of staff and customers
- Most effective way to meet and exceed compliance requirements
- Competitive advantage as a preferred provider
- Efficient allocation of resources according to risk and opportunity
- Reduces the likelihood of incidents and associated cost.
